

WebAnalyticsLand

Get Folder Name Plugin

The getFolderName plug-in captures a folder name from the URL of the web page. Once captured, the value can be populated into any other JavaScript variable.

Plugin Prototype

s.getFolderName(f)

Parameter Descriptions

f=number of which folder in the URL that is to be captured

Example

Here is an example use of the plugin to populate an s.prop variable with the name value of the folder noted in the function call.

For the URL webanalyticsland.com/apple/orange/pear/index.php

```
s.propX=s.getFolderName(1); -- would return apple  
s.propX=s.getFolderName(2); -- would return orange  
s.propX=s.getFolderName(3); -- would return pear
```

Code

```
/*  
 * Plugin getFolderName  
 */  
s.getFolderName=new Function("n",""  
+"var p=s.wd.location.pathname.substring(0, document.location.pathnam"  
+"e.lastIndexOf('/') + 1),pa=p.split('/');if(pa[0]=='){for(var "  
+"i=0;i<pa.length;i++){pa[i]=i!=pa.length?pa[i+1]:null;}}return n?pa["  
+"parseInt(n)-1]:'';");
```
